Got Spyware?

We have the solution

What are Spyware, Malware and Adware?

They are software made by publishers that allow them to snoop on your browsing activity, invade your privacy, and flood you with those horrible popups. If you are like most users on the internet, chances are you are probably infected with these applications.

How do I know if I have spyware?

The effects of spyware on the individual PC user range from minor annoyances to serious impacts on PC performance, security, and privacy. More often than not, spyware-related issues reported by users come in the form of one or more of these common symptoms:

Unauthorized pop-up advertisements, even when not browsing the Web

A sudden and dramatic slowdown in PC performance

Increased crashing of operating systems, Web browsers, and other common applications

Most Common Programs To Avoid

If you receive a "WARNING" window on your screen telling you that you are infected with 230+ Viruses, Spyware or Trojans,

DO NOT CLICK ON ANY PART OF THAT "AD WINDOW".

It will infect you and take your computer hostage!

Shut off or restart your computer and then scan with Malwarbytes and then Microsoft Security Essentials to remove any Malware on your computer.
